Set up Instructions and Operation of Model HD-2SHP (35-50 GPM) High Capacity Hydraulic Drive on J & M Grain Cart

IMPORTANT – Before installation and operation of the hydraulic drive, make sure to read this and all owner's manuals on the machine.

IMPORTANT – MAKE SURE THAT ALL POWER IS SHUT OFF BEFORE INSTALLING HYDRAULIC DRIVE. Installation work to be performed by qualified servicemen only. Please refer to your operator's manual for additional safety information.

Be sure to use SAE 10W40 or SAE 5W30 oil or tractor hydraulic fluid with high levels of zinc anti-wear additives (see your tractor owner's manual). Type A, F or Dextron transmission fluid must Not be used. Hydraulic oil must never exceed 180 Degrees Fahrenheit. For optimum performance use 5 to 25 micron filtration on system.

Your hydraulic drive comes partially assembled. When mounting to the grain cart, attach the lower motor mount bracket (11) to the brackets welded on the frame of the grain cart using 4 – ½" x 1" Bolts (13) and 4 – ½" Lock Nuts (14) provided. Remove step guard from the frame of the grain cart. Attach the upper motor mount bracket (10) to the lower motor mount bracket using 2 – ½" x 1" bolts and ½" lock nuts. Attach U-joint (17) to the cart driveshaft using 2 – 3/8" Set Screws (15). (Make sure that the key is secure on the driveshaft). Secure the step guard to the frame of the grain cart using the 3/8" nuts provided. Recheck all bolts, nuts, set screws and fittings and make sure that they are properly tightened. Insert the hoses into tractor hydraulic remote ports. **CAUTION** – Hydraulic oil leaking under pressure can penetrate the skin and cause infection or other injury.

To prevent personal injury:

Never use your hand to check for suspected leaks under pressure. Use a piece of cardboard or wood for this purpose. Before applying pressure, make sure all connections are tight and components are in good condition.

Relieve all pressure, before disconnecting fluid lines. If injured by leaking fluid, see your doctor immediately.

Before operating the hydraulic drive, make sure that your tractor hydraulic system delivers between 35 and 50 gallons per minute. **CAUTION** – The maximum pressure on the hydraulic motor is 3000 PSI and the maximum flow is 50 gallons per minute (intermittent use). **AT NO TIME** during the operation of this motor should the maximum pressure and the maximum flow occur

J. & M. MFG. Co., Inc.

284 Railroad Street P.O. Box 547
FORT RECOVERY, OHIO 45846

Phone (419) 375-2376

simultaneously. (If the hydraulic drive is used continuous, the maximum GPM is 40).

Break In Period – Before placing the hydraulic motor into service, be certain to run the system at ½ speed under NO load for 15 minutes. **CAUTION** – Before operating the hydraulic drive, make sure that everyone is clear of the equipment before applying power. Operate the hydraulic drive from a safe distance. Always keep hands, feet, and clothing away from moving parts while the unit is in operation.

Operating Instructions – Before operating this machine, make certain that you have read and fully understood the operator's manual on the grain cart. If this machine is used by an employee or rented or loaned, make certain that the operator(s) have read all manuals, cautions, and warnings and understood as to the safe operation of the grain cart.

Before filling the grain cart, make certain that the gate indicator is in the closed position. Fill the grain cart with grain. After the cart is filled and ready for unload, position the auger to the upright position (follow the instructions in the grain cart owner's manual) and engage the hydraulic drive (start at idle speed and increase to operating speed). Slowly open the inner gate while checking the pressure gauge on the hydraulic motor. Once the pressure gauge reading is between 1800 and 1900 PSI, discontinue opening the gate (pressure is low under no load). **NOTE** – The size of the gate opening allowed and the unloading time will vary as to the type of grain, moisture content, quality of the grain and the GPM delivery of the tractor. Follow your owner's manual for details on complete cleanout. Once the grain has been unloaded from the tank of the grain cart, disengage the hydraulic drive and return the auger to the lowered position.

NOTE: If only one outlet is available, remove two ¾" x 66" hydraulic hoses and plug the two tee fittings. (Performance of hydraulic drive will be reduced.)

OPTIONAL HYDRAULIC DRIVE KIT FOR GRAIN CART
15 Cubic Inch Motor for Tractor Output Requirement between 35-50 gpm

#	Part #	Description
1	64001216	3/4" Male JIC x 1" O-Ring
2	65011212	3/4" Male Pipe x 3/4" Female JIC
3	68051616	1" Nut with O-Ring x 1" Female Pipe
4	54061612	1" Male Pipe x 3/4" Female Pipe Bushing
5	5602-12-12	3/4" Male Pipe x 3/4" Female Pipe x 3/4" Branch Tee
6	5503-12-12	3/4" Male Pipe x 3/4" Female Pipe 45 Degree Elbow
7	CV-6P05	Check Valve
8	4000PSI	1/4" Male Pipe 4,000 PSI Pressure Gauge
9	HH-3466	3/4" Male Pipe x 1/2" Male Pipe Hose
10	55020404	1/4" Male Pipe x 1/4" Female Pipe St. Elbow 90 Degree
11	HCM50GPM	High Capacity Motor Complete
12	112HHMB	1/2" x 2" Bolt with Nut
13	12114HHMB	1/2" x 1 1/4" Bolt with Nut
14	UMPHCM	Upper Mounting Plate
15	LMMB-1	Lower Mounting Plate
16	121HHMB	1/2" x 1" Bolt with Nut
17A	HCM1	U-Joint (1 3/4" End x 1 1/2" End)
17B	HCM2	U-Joint (1 1/4" End x 1 1/2" End)
18	SS-3812	3/8" x 1/2" Set Screw
19	KE-38	3/8" Key

FMC-200-HYD-310			18-24 GPM
FMC-200-HYD-304	X	X	11-19 GPM

PC CLOSED CENTER

On Pressure Compensating Closed Center Systems, the flow of oil to the Ace hydraulic motor is controlled by using a calibrated **restrictor orifice**.

To set up: 1) Install the restrictor orifice in the intake port of the Ace motor. 2) Close the needle valve on the Ace motor by loosening the jam nut and screwing the needle valve in a clockwise direction all the way down.

LS CLOSED CENTER

On Load Sensing Closed Center Systems, also known as Pressure Flow Compensating (PFC) Systems, the flow of oil to the Ace hydraulic motor is controlled by adjusting the **flow control lever** on the tractor.

To set up: 1) Close the needle valve on the Ace motor by loosening the jam nut and screwing the needle valve in a clockwise direction all the way down. 2) Shut off boom and agitation valves on the sprayer. 3) Set the flow control lever on the tractor until the sprayer system dead head pressure is between 60 and 100 psi. 4) Open the agitation valve to get desired spraying pressure. (Note: Do not use the restrictor orifice.)

OPEN CENTER

On Open Center Systems, the flow of oil to the Ace hydraulic motor is controlled by adjusting the **needle valve** on the Ace hydraulic motor.

To set up: 1) Shut off boom and agitation valves on the sprayer. 2) Set tractor throttle to speed at which you will be spraying. 3) Loosen jam nut on hydraulic motor, and back out needle valve 3 or 4 turns. 4) Engage tractor hydraulic lever, then screw the needle valve clockwise until the sprayer system dead head pressure is between 60 and 100 psi, then lock the jam nut. 5) Open the agitation valve to get desired spraying pressure. (Note: Do not use the restrictor orifice.)

GENERAL NOTES

1. The tractor hydraulic system data contained in these tables should be used as a guide only. For more detailed information, consult your tractor manufacturer.

2. Tractors must have adequate oil cooling to operate a sprayer pump with a hydraulic motor. While most modern systems have excess oil cooling capacity, some systems may require an auxiliary cooler. As a rule of thumb, the maximum temperature for hydraulic oil is 100 degrees Fahrenheit over ambient.

3. On tractors with a hydraulic lever "Float" position, operate the sprayer pump in the "Lower" position and shut the pump off in the "Float" position. This eliminates high pressure from being trapped in the return line.

4. With the 210 and 310 motors the hydraulic system pressure may be insufficient to raise implements. Turn pump off to restore normal system pressure.

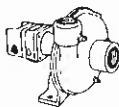

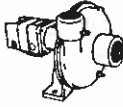

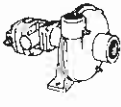

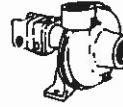

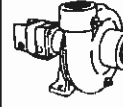

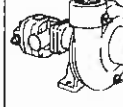

CAUTION: DO NOT EXCEED THE MAXIMUM SHUT-OFF PRESSURE. Failure to limit the flow of oil to hydraulic motor can result in motor seizure.
MAXIMUM SHUT-OFF PRESSURE RATINGS:
 100 PSI for FMC-HYD Series
 120 PSI for FMC-150-HYD Series

General Note: Do not tie hydraulic lever in any active position.

(1) Series 10 tractors with three cylinder engines can have either OPEN center or a type of CLOSED center hydraulic systems. The type system is most easily identified by the location of the hydraulic valves.

On OPEN center systems, the hydraulic valves are located under the seat with the hoses running to the couplers in the rear.

On CLOSED center systems, the hydraulic valves are located at the rear of the tractor.

(2) Select model FMC-HYD-210 when pumping pressures between 60 and 100 PSI are required.

(3) Ford's CLOSED hydraulic system has constant displacement pumps and senses the pressure drop between the combining valve and the remote ports. Most other closed centered systems have a variable displacement pump. Contact Ford New Holland before operating a hydraulic driven sprayer pump on a tractor with this type hydraulic system. An auxiliary oil cooler may be required for continuous duty sprayer pump operation.

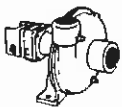

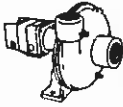

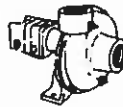

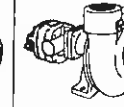

(4) Manufactured prior to July 1985.

(5) Manufactured after July 1985.

- (1) Select model FMC-HYD-210 when pumping pressures between 60 and 100 PSI are required.
(2) In the 86 Series tractors with open center systems, the hydraulic system was not designed for continuous hydraulic demand at the remote valves. These tractors will require the Ace Pump IHK-86 kit for sprayer pump operation. Refer to Ace form 4013-A for complete installation instructions. Reference the International Harvester Service Bulletin S-3436 dated March 31, 1977.
(3) Requires IHK-86 kit for operation.

General Notes:

- A) The hydraulic systems on Massey Ferguson tractors may not have been intended for the continuous duty operation of a hydraulic driven sprayer pump. Auxiliary oil cooling may be necessary. Please consult Massey Ferguson before installing a hydraulic motor driven sprayer pump.
- B) On tractors with two hydraulic pumps, shut off the combining valve located on the right side of the tractor so the remote ports get only open center flow.

- (1) Select model FMC-HYD-210 when pumping pressures between 60 and 100 PSI are required.
- (2) Consult Massey Ferguson to determine the type hydraulic system and the method for regulating the hydraulic oil to the Ace Pump.
- (3) Use left hand remote ports to connect hydraulic driven pump. Right hand spool has priority over 3 point hitch.
- (4) These tractors have an optional LS CLOSED hydraulic system. For the LS Closed system the Max. Remote Pressure is 2900 PSI and Max. Remote Flow is 26 GPM.
